This Annual Subject Index, published in five volumes, consolidates more than 159,000 references to approximately 45,000 abstract records published in 12 monthly issues of *Psychological Abstracts* from January 1995 through December 1995. A companion work, the Annual Author Index, references these records by author and document title.

Index terms, selected from the *Thesaurus of Psychological Index Terms,* represent the literature covered for the periods indicated. Only terms assigned as major terms, reflecting the main focus of the article, appear in the printed subject index. (Terms assigned as minor do not appear in print but are available for online searching.) Subject matter content determines the specific terms used and, thus, not every thesaurus term will appear in every index. "See" and "See Also" references are present to direct the user to the preferred terminology or related areas of interest. Index phrases are alphabetically arranged under the appropriate index terms and represent a concise statement of the article's content or, when appropriate, identify the independent and dependent variables described in the material as well as the subject population. Style changes such as the increased use of abbreviations or the elimination of some hyphens may result in some inconsistencies and may affect the alphabetical order of phrases.

Jeopardy in the Courtroom

A Scientific Analysis of Children's Testimony

Stephen J. Ceci and Maggie Bruck

The credibility of children's testimony is a highly debated topic in America's courtrooms, universities, and living rooms. Does the ingenuousness of children assure that their testimony will always be truthful? Or are children easily misled by overzealous investigators and therapists into making untrue allegations? Stephen J. Ceci and Maggie Bruck contend that the truth falls somewhere between these extremes. Using case studies, ranging from the Salem Witch Hunt to the Little Rascals Day Care Case, to illustrate their argument, ***Jeopardy in the Courtroom*** draws from the vast corpus of scientific research to clarify what is most relevant for evaluating and understanding children's statements made in the legal arena. Bringing good science and good sense to a topic that is as timely as it is controversial, Ceci and Bruck

- provide prevalence and incidence statistics on child abuse,
- provide theoretical overviews of memory and suggestibility,
- trace the history of research on suggestibility from the turn of the century to the present,
- explore the dynamics of structured and therapeutic interviews with children,
- examine the topic of recovery of repressed memories of early childhood abuse,
- evaluate the research regarding age differences in the reliability of children's reports, and
- offer tips for conducting interviews with children in a sensitive and professional manner.

Written in lively, accessible language by acknowledged experts in the field, this book will be an invaluable guide for expert witnesses and all those who work with child witnesses, including therapists, social workers, law enforcement personnel, and lawyers.
